

1

2

3

4

Verbs

- Two important rules
 - The number of subject determines the number of verb
 - Do not mix inconsistent tenses
- Uses of verbs
 - Number and person
 - Active or passive voice, which person?
 - Tenses
 - Noun syndrom
 - Irregular verbs
 - Notes

© SolCT 2020 Technical Writing and Presentation 5

5

Number and person

- When the subject is singular third person (she/he/it), the verb needs suffix -S
- The auxiliary verbs have their own special forms (is, can, has, does).
- When the subject is composed of a singular and a plural noun by "or" or "nor", the verb agrees with the noun that is closer.

© SolCT 2020 Technical Writing and Presentation 6

6

Notes

- Be careful with special phrases:
 - "A number of new experiments **were** done" (plural)
 - "Plenty of time **was** spent..." (singular)
 - "A few data points **belong** to cluster X" (plural)
- If the number of the subject changes, retain the verb in each clause.

✗The positions in a sequence **were** changed and the test rerun

✓The positions in the sequence **were** changed, and the test **was** rerun.

© SolCT 2020 Technical Writing and Presentation 7

7

Tenses

- Default: the present
- It is possible to combine **perfect** (has been) (and **future**, will be) if needed, but **not the other tenses**
- Past or present perfect (but not both) when you describe previous research (literature review)
- Past tense to describe the experiments and their results
- Notice: Use "would" with care! It expresses a conditional action.
 - E.g. "it would appear" → "it appears"

© SolCT 2020 Technical Writing and Presentation 8

8

Active voice vs passive voice

- It is often recommended to use active voice,
- In scientific writing passive voice is sometimes convenient.
- Passive voice allows us to draw the reader's attention to the phenomenon or the event, instead of the actor.
E.g.
"The probabilities are updated by Bayes rule",
"The score is assessed on the basis of the training data."
- Often the purpose determines the voice.

© SolCT 2020

Technical Writing and Presentation

9

9

Passive voice

- Usually we want to begin with a familiar word and put the new information in the end.
E.g. before an equation or a definition, we can say "The model is defined as follows"
- Do not overuse passive, and do not chain passive expressions.
- Use only one passive per sentence

© SolCT 2020

Technical Writing and Presentation

10

10

Passive expressions

- "It is"
 - E.g. "It is often recommended [reference] that..."
 - Typical verbs in this expression are: say, suppose, consider, expect.
- "We" can be used as passive.
E.g. "In Chapter X, we define the basic concepts."
should be replaced with
"The basic concepts are defined in Chapter X."

© SolCT 2020

Technical Writing and Presentation

11

11

Other expressions

- "You" is sometimes used as passive, especially in manuals. **Don't use it in scientific text!**
- "People" when you refer generally to people.
Quite a vague expression, not recommendable!
- "There is/are" is used when the real subject (what is somewhere) comes later and we haven't mentioned it before.
E.g. "There was only one outlier in the data set 1" v.s.
"The outlier was in the data set 1."
- "The verb is nearly always "be" (sometimes "exist" or something else)

© SolCT 2020

Technical Writing and Presentation

12

12

Person

- **Basic rule:** avoid the first person.
- Referring to yourself: you can talk about "the **author**".
E.g. "All programs have been implemented by the author"
- Gender-neutral language: when you refer to an unknown user, student, etc. try to use gender-neutral language.
 - The most common way is to say "she/he" or "he or she"
 - "One" is neutral, but sounds often awkward.
 E.g. "The learner can define one's own learning goals"
- Sometimes you can avoid the problem by using **plural**

© SolCT 2020 Technical Writing and Presentation 13

13

Notes

- Do not use **short forms** "isn't, can't, doesn't", but "is not, cannot, does not".
- Use "be verb+ing" form when something is currently happening or takes some time.
E.g. "Thread 2 can be started in the same time when thread is still running"
- Some verbs require that the following verb is in -ing form
E.g. "Continue splitting until criterion X has been reached."
- "Noun syndrom" = use of common verbs {be, do, have, make, ...} + a noun ⇒ Prefer illustrative verbs!
E.g. "We can get better understanding..." ⇒ "We can understand better"

© SolCT 2020 Technical Writing and Presentation 14

14

Nouns

- Plural forms
- Countable and uncountable nouns
- Differences between British and American English

© SolCT 2020 Technical Writing and Presentation 15

15

Plural Forms

- **Irregular plural forms**

Singular form	Plural form	Singular form	Plural form
half	halves	analysis	analyses
life	lives	thesis	theses
axis	axes	parenthesis	parentheses
matrix	matrices	basis	bases
child	children	emphasis	emphases
automaton	automata	series	series
vertex	vertices	medium	media
index	Indices (indexes)	criterion	criteria
appendix	appendices (appendixes)	phenomenon	phenomena

© SolCT 2020 Technical Writing and Presentation 16

16

Special cases

- **Data** is originally the plural form of **datum**, but nowadays it is frequently used as a **singular word**.
- The same holds for **hypermedia**.
E.g.
"The data **is** biased",
"Hypermedia **offers** a new way to implement learning environments"

© SolCT 2020

Technical Writing and Presentation

17

17

Notes

- If the suffix is {-s, -ss, -sh, -ch, -x, -z} in singular → -es in plural,
E.g. research – researches, approach – approaches, quiz – quizzes
- The same happens with most words which have suffix -o, unless the word is abbreviated or of foreign origin.
E.g. cargo – cargoes,
- but photo – photos, dynamo – dynamos
- After **consonant** -y changes to -ies in plural.
E.g. floppy – floppies.
- **Singular words which look like plural forms**
The names of disciplines: mathematics, statistics, physics.
"Statistics is the precessor of data mining."

© SolCT 2020

Technical Writing and Presentation

18

18

Uncountable nouns

- Words expressing material: water, air, wood, ...
- Abstract words: life, time, work, strength, ...
- Exceptional: advice, information, news, equipment, money (Plural meaning)

© SolCT 2020

Technical Writing and Presentation

19

19

Compound words

- The practices vary, possibly words are written together, with a hyphen -, or separately.
- If the words have become one concept, they are usually written together, e.g. "software", "keyboard", "database"
- If the independent meaning of words is emphasized, they are hyphenated, e.g. "non-connected"
- Hyphen is often used when the concept consists of more than two words:
"depth-first search", "between-cluster variation", "feed-forward neural network", "first-order logic"
- Multiple word adjectives are usually hyphenated, e.g. "data-driven", "model-based", "class-conditional"
- If the first part is a symbol or an abbreviation, the word is hyphenated, e.g. "NP-complete", "k-nearest neighbour method", "3-dimensional"

© SolCT 2020

Technical Writing and Presentation

20

20

Articles

- Position
- Definite and indefinite concepts
- Basic rules of using articles

© SolCT 2020

Technical Writing and Presentation

21

21

Position

- Basic rule: before the noun phrase
- Exceptions:
 - {what, such, quite, rather, half} + a/an + noun phrase
E.g. "Too great a distance", "so long a time"
 - {too, as, so, how, however} + adj. + a/an + noun
E.g. "as big a difference"
 - {all, both, double, twice, half} + the + noun
E.g. "All the methods"

© SolCT 2020

Technical Writing and Presentation

22

22

Definite and indefinite concepts

- A concept is **indefinite**, when you mention it first time, and it is not clear from the context
E.g. "There was a time delay between processes A and B."
- It is **definite**, when
 - you mention it again
 - the context defines what you mean
 - the concept is familiar to everybody
 - Usually this kind of expressions are defining: "The delay between two processes $P1$ and $P2$ is $tend(P1) - tstart(P2)$."

© SolCT 2020

Technical Writing and Presentation

23

23

Basic rules of using articles

© SolCT 2020

Technical Writing and Presentation

24

24

Refer to an indefinite concept

- a singular countable noun → **a/an**
- a plural countable noun + positive clause → **some**
- a plural countable noun + negative or interrogative clause → **any**
- a uncountable noun + pos. clause → **some**
- a uncountable noun + neg. or interr. clause → **any**

© SolCT 2020

Technical Writing and Presentation

25

25

Notes

- **When you refer to something generally**
a plural countable noun or a uncountable noun → no article
"Students need time to process new information"
- **When you refer to the whole class**
a singular countable noun → a/an
"The computer cannot solve all problems"
- **Exceptional expressions**
Sometimes you can use a/an article with an abstract word:
 - when the word is preceded by a describing relative clause "There is a danger that the model overfits"
 - expressions "a /short/long time", "a while"

© SolCT 2020

Technical Writing and Presentation

26

26

"the" article with ordinal numbers and some adjectives

- Definite article "the" is used
 - when the noun is preceded by an ordinal number
"The first attribute describes..."
 - when the noun is preceded by an adjective expressing order
"the next attribute", "in the following chapter"
 - with adjectives **same, only, right, wrong**
"The results were the same", "The only model which has this property is X"
- Notice: "the" is not used with ordinal numbers or adjective "last", when you refer to the performance in a competition
"Program X came first and program Y was last when the programs were compared by the Z test."

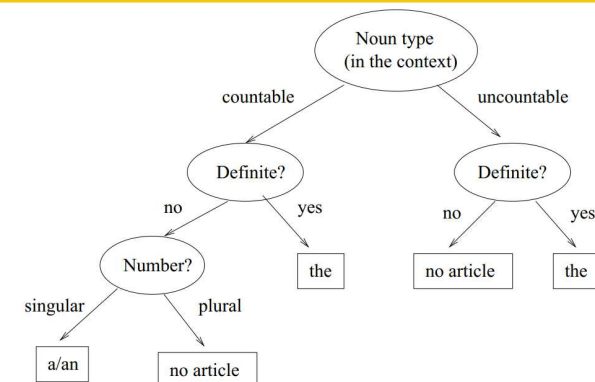

© SolCT 2020

Technical Writing and Presentation

27

27

Decision tree for articles

© SolCT 2020

Technical Writing and Presentation

28

28

Notes

- A noun can be used as a countable or an uncountable concept
"It takes time...", "all the time", "one at a time", "many times"
- **any** or **some** before the noun, → indefinite",
E.g. "The disk contains (some) space for back-up files"
- Don't use pronouns! "This x" → "the x" (where x is a noun)
- $\exists x \in C$ such that $P(x)$, use article **a/an**.
- $\forall x \in C, P(x)$, use article **the**. (only for countable concepts!)
- A name without any modifying word → no article,
E.g. "X is independent from Y"
- A modifying word like "set", "vector", "model" etc. stands before the name → Two habits:
 1. No article when you mention the entity for the first time. After that use definite article "the", or
 2. Never any articles.

© SolCT 2020 Technical Writing and Presentation 29

29

Pronouns

- Two important rules when you use pronouns:
 1. When a pronoun refers to a noun in the preceding sentence, make sure that the **referred is obvious!**
 2. Each pronoun should agree with the referent in number and gender.

© SolCT 2020 Technical Writing and Presentation 30

30

Notes

- **Pronouns which require singular verb form**
{everybody, anybody, nobody, everyone, anyone, no one}
- Every + singular noun
- All + singular or plural noun
- several < many
several ≈ some

© SolCT 2020 Technical Writing and Presentation 31

31

Adjectives

- Two notes:
 1. **Avoid vague adjectives!**
 2. How to derive and use comparative and superlative forms?

© SolCT 2020 Technical Writing and Presentation 32

32

use the comparative

- Basic structure:
 - X is **as** efficient **as** Y (X and Y are equally efficient)
 - X is more efficient **than** Y
- Exceptional expressions:
 - X is **different from** Y
 - X is **similar to** Y
 - X is **the same as** Y
 - X is **inferior/superior to** Y
 - X is **equal to** Y

© SolCT 2020

Technical Writing and Presentation

33

33

Adverbs

- Use as few adverbs/prepositional phrases as possible!
 - expressive verbs and nouns
- Use introductory adverbs like "fortunately, similarly, conversely, certainly" carefully
- Notice that "importantly" and "interestingly" are not proper adverbs.
 - E.g.
 - "More importantly, the accuracy can actually increase when the complexity is reduced"
 - "More important, the accuracy can actually increase when the complexity is reduced."
 - "Interestingly, we found that..."
 - "An interesting finding was that..."

© SolCT 2020

Technical Writing and Presentation

34

34

Special cases of adverbs

still and yet

- Still: before the main verb, but after be-verb.
 - "These enlargements are still unimplemented"
- Yet: at the end.
 - "These enlargements have not been implemented yet."

so and such

- So: before adjectives or adverbs which are **not** succeeded by nouns
 - E.g. "The time complexity is not so hard"
- Such: when an adjective is succeeded by a noun.
 - E.g. "Such time complexity is infeasible"
 - Notice the article "a/an", if the noun is countable:
 - "such a system"
 - "such an algorithm"

© SolCT 2020

Technical Writing and Presentation

35

35

Prepositions

- Be careful with prepositions. A wrong preposition can give a totally different meaning!
 - Hint: When you use a preposition, visualize the direction it is signaling and ask yourself if it is appropriate.
 - If you are unsure about the use of a preposition, ask yourself what a cat would do! (Fedor's sciwri book)
- Cats sit **on** mats, go **into** rooms, are part **of** the family, roam **among** the flowers

© SolCT 2020

Technical Writing and Presentation

36

36

Expressing location

- Usually **in**, e.g. "in set X "
- If an exact location, then **at**, e.g. "at point (x, y) "
- If the location can be imagined as a line or a surface, then **on** "on the x -axis", "on a time line"
- Special cases:
 - "on page 3", "on line 5", "on the Internet"
 - "A file is loaded **from** the hard disk **into** main memory."
 - "results **from** the survey suggest..."
- over – under/beneath
- above – below
 - "X's points were **below** the average points"
 - "The task is to optimize f **under** the given constraints"

© SolCT 2020

Technical Writing and Presentation

37

37

Expressing time

- **Exact time: at**, e.g. "at the moment", "at four o'clock", "at the same time"
- **Longer period of time: in**, e.g. "in the 1970's", "in the future", "in five minutes",
- Notice: "In the beginning/end" vs. "At the beginning/end" of something

© SolCT 2020

Technical Writing and Presentation

38

38

Expressing the target or the receiver

- **to or for?**
- Basic rules:
- When direct receiver, then **to**
 - "The values are assigned to variables"
- When the final receiver (for whom something is meant) then **for**
 - "I gave the book for Belinda to Tersia"
 - "The messages for nodes F and G are transferred to node D for rerouting"
 - "A variety of methods have been developed for the clustering problem."
 - When something is good or bad for something, then **for**
 - "Problem-based learning is good for students"

© SolCT 2020

Technical Writing and Presentation

39

39

Expressing the target or the receiver

- Some verbs require either for or to:
 1. If the verb is {bring, give, take, show, offer} → **to**
 2. If the verb is {be, get, keep, make} → **for**
- Sometimes the preposition can be missing, depending on the word order:
 - i) verb + receiver + object
 - ii) verb + object + to/for + receiver
 - iii) verb + to/for + receiver (no object)

© SolCT 2020

Technical Writing and Presentation

40

40

Special phrases

<ul style="list-style-type: none"> • constraint on something • independent from something but dependent on something • different from something but similar to something • difference between something and something • prefer something to something • impact of something on something • influence on something • effect on something (but to affect something) • focus on something • perform in some manner • generalize to something • a discussion about/on something • research on something but a study of something • reason for something • opportunity of/for something 	<ul style="list-style-type: none"> • in spite of something (but despite something) • regardless of something • take into account • in relation to something • in contrast with something • a proportion of something. ("a large proportion of data") • in proportion to something, proportional to something ("The time complexity of f proportional to n is...") • the ratio of a to $b = a/b$ • $x\%$ of y • under some conditions • by default • contrary to something • in contrast • by contrast (~ "however") • on the contrary • at an extreme
---	--

© SolCT 2020 Technical Writing and Presentation 41

41

Parallel structures

- **Parallel structure** = words, phrases, clauses or sentences combined by commas and/or conjunctions.
- Here we call the combined items as **parallel items**.
- Parallel items are combined by parallel conjunctions (and, or, but, ...).
- lists are also parallel structures!
- Often the parallel structure lists alternatives or makes some kind of comparison: the items belong to the same or similar classes or to two opposite classes.
E.g. "Method X has several advantages: it is easy to implement, it works in polynomial time, and it can use both numeric and categorical data."
contains two parallel structures: three advantages ("it is, it works, it can") in a list and "both numeric and categorical data"

© SolCT 2020 Technical Writing and Presentation 42

42

Basic rules for parallel structure

- The parallel structure should be consistent in two ways
- **Semantically**: the concepts referred by parallel items should be comparable
- **Syntactically**: the items should have similar grammatic structure. All of them should be either nouns, noun phrases, verb phrases, or clauses.
- Parallel items should be in the same form, e.g. you cannot combine "to" + verb and a verb without "to".
E.g. "The problem is both hard to define and solve"
→ "The problem is both hard to define and to solve"

© SolCT 2020 Technical Writing and Presentation 43

43

conjunction pairs

- Parallel items combined by conjunction pairs
 - between...and,
 - both...and,
 - either...or,
 - neither...nor
 - not only...but...(also)

"X solves the problems of traditional clustering algorithms. **Neither** outliers **nor** missing values affect the clustering quality."
"The task is **not only** easy to solve **but** it can **also** be solved efficiently"

© SolCT 2020 Technical Writing and Presentation 44

44

The comparative – the comparative

- the + comparative + x + comma + the + comparative + y, where x and y complete the clauses

"**The more complex** the model is, **the better** it describes the training data."

© SolCT 2020

Technical Writing and Presentation

45

45

Parallel sentences

- The sentences in the list begin by ordinal numbers "First, Second, Third"
- "X model has three important properties: **First**, the model structure is easy to understand. This is a critical feature in adaptive learning environments, as we have noted before. **Second**, the model can be learnt efficiently from data. There are feasible algorithms for both numeric and categorical data. **Third**, the model tolerates noise and missing values."

© SolCT 2020

Technical Writing and Presentation

46

46

Sentences

- Terminology
- Sentence styles
- Types of dependent clauses
- Sentence length
- Word order
- Combining clauses

© SolCT 2020

Technical Writing and Presentation

47

47

Terminology

- A **sentence** consist of one or more clauses
- A **clause** contains always a subject and a predicate, and usually an object
 - An **independent clause** (main clause) can make a sentence alone.
 - A **dependent clause** (subordinate clause) needs an independent clause for support

© SolCT 2020

Technical Writing and Presentation

48

48

Sentence types

- The sentence type depends on the type of its main clause. The main types are following:
 1. Statement (ends by a full stop: "x is y.")
 2. Question (ends by a question-mark: "Is x y?")
 3. Order (ends by an exclamation mark: "Be x y!")
- In scientific writing the default type is the statement.
- Direct questions and orders are seldom used.
- Questions suit best to the introduction where you state your main research questions clearly and concretely

© SolCT 2020

Technical Writing and Presentation

49

49

Types of dependent clauses

1. Clauses beginning by sub-ordinating conjunctions (when, if, because, while, ...)
2. Relative clauses (begin by relative pronouns which, who, that)
3. Indirect questions (begin by question words or if/whether)

Examples:

"The dependency is trivial, **because** $Y = f(X)$."

"X and Y are linearly independent, **if** the correlation coefficient, $\text{corr}(X, Y)$, is zero"

"Let c_i be the cluster **which** is closest to x."

"We select the first model **that** fits the data."

"First we should study **what** is the relationship between X and Y"

"The main problem is **whether** X can be applied in Z."

"We analyze the conditions **under which** X can be applied."

© SolCT 2020

Technical Writing and Presentation

50

50

Sentence length

- always less than 30 words, preferably less than 20 words!
- 1-3 clauses
- expresses one idea
- If you tend to write too long sentences, try the following:
 - Identify the main subject-predicate-object section
 - Prune or compress everything else, which is not needed
 - Check the verb structures and ask yourself if they could be shorter

© SolCT 2020

Technical Writing and Presentation

51

51

Word order

- The order of words has a strong impact on the meaning!
- E.g.
- "There is, however, currently no information about the limitations of quantum computers." →
- "However, there is no current information about the limitations of analog computers." →
- "However, the limitations of current quantum computers are not known."

© SolCT 2020

Technical Writing and Presentation

52

52

Word Order

- Look at 3 examples:
 - "There is, however, currently no information about the limitations of quantum computers."
 - "However, there is no current information about the limitations of analog computers."
 - "However, the limitations of current quantum computers are not known."

© SolCT 2020 Technical Writing and Presentation 53

53

Word order in different languages

SOV	Urdu, Ancient Greek, Bengali, Hindi, Japanese, Korean, Latin, Persian, Sanskrit
SVO	Chinese, English, French, Hausa, Italian, Malay, Russian, Spanish, Thai
VSO	Biblical Hebrew, Arabic, Irish, Filipino, Tuareg-Berber, Welsh
VOS	Malagasy, Baure, Car
OVS	Apalai, Hixkaryana, Klingon
OSV	Warao

© SolCT 2020 Technical Writing and Presentation 54

54

Basic Word Order

- subject-predicate-object (SVO)**
- You can add attributes, phrases and clauses, but don't deviate too far from the basic format
- Goal: put the most important information to the beginning of a sentence or begin by a familiar thing and put the new information to the end
- E.g. "X is a new algorithm for the TS problem"
- "The probabilities are updated by the Bayes rule:" + the equation.
- Often the sentence is most informative, if you express the most important topic by the subject.
- This format helps to write clear and compact sentences

© SolCT 2020 Technical Writing and Presentation 55

55

More details about word order

- The adverbs and prepositional phrases occur in order: **way, place, time**
 - "The nearest neighbours can be identified **efficiently** (way) **in a dendrogram** (place)".
 - "The values can be updated **easily** (way) **in linear time** (time)".
- Verb modifiers: in the middle of clause**
- Adverbs which express frequency: always, ever, never, often, seldom, sometimes, usually
- Adverbs which can begin the clause**
 - If the adverb expresses time, it can be also in the beginning: "Next, the data is loaded to the main memory."
 - This gives more emphasis to the word. It is also used, when there are other adverbs/prepositional phrases in the end of the clause.
 - Introductory adverbs like "obviously", "fortunately", etc. are always set to the beginning (if they are needed)

© SolCT 2020 Technical Writing and Presentation 56

56

Combining clauses

- Say the main message in the independent clauses! Use dependent clauses only to add details
- Contents
 - Combining two independent clauses
 - Combining clauses by sub-ordinating conjunctions
 - Relative clauses
 - Indirect questions

© SolCT 2020 Technical Writing and Presentation 57

57

Combining clauses by sub-ordinating conjunctions

- The basic form: an independent clause + a sub-ordinating conjunction + a dependent clause.
- The most common sub-ordinating conjunctions express
 1. a chronological order: **when, as, as soon as, while, after, before, until, since**
 "The search can be halted as soon as *minfr* proportion of data is checked"
 2. a conditional relationship: **if, unless**. If-clauses can also begin the sentence
 "If the order is fixed, the episode is called serial."
 3. a reason: **because** (Recommendation: reserve word "since" to express chronological order)
 "The method is time-efficient, because all the parameters can be updated in one loop"
 4. a purpose: **so that** (You can also use **in order to** + infinitive verb)
 5. an admission: **although, even if**

© SolCT 2020 Technical Writing and Presentation 58

58

Notes

- When you combine
 - an independent clause + a dependent clause
 → sometimes but not always a comma (e.g. before **but**, but not before **that**).
 - a dependent clause + an independent clause
 → always a comma

© SolCT 2020 Technical Writing and Presentation 59

59

Relative clauses

- Relative clauses can be divided into two categories: **Restrictive** or **Non-restrictive**
- **who** refers to a person. **whose** is the genitive form, it can refer to things and objects, too!
- **whom** is used as an object and with prepositions,
- **which** refers to things and objects, can be used as a subject or an object or with prepositions.
- In most cases, the genitive form can be either **of which** or **whose**.
- **that**
 - can be used only in restrictive relative clauses! → never use comma before it!
 - can refer to people or things,
 - can be used both as a subject and an object.
- If you need prepositions, they have to be in the end of the clause!
- **what** contains also the correlate

© SolCT 2020 Technical Writing and Presentation 60

60

Combining two independent clauses

- A **compound sentence**= two or more independent clauses which are combined by co-ordinating conjunctions or (rarely) by semicolons.
- Combine only two main clauses (unless the clauses have the same subject which is mentioned only once).
- The ideas expressed in the clauses must be closely connected (otherwise separate sentences).
- The most common co-ordinating conjunctions are **and** and **but**.
 - **and** links one idea to another.
 - E.g. "The data is sparse and the model overfits easily."
 - **but** establishes an interesting relationship between the ideas → a higher level of argument.
 - E.g. "The data was sparse, but the model did not overfit." (= "Even if the data was sparse, the model did not overfit.")

© SolCT 2020

Technical Writing and Presentation

61

61

Indirect questions

- The dependent clause begins by a question word **what, why, when, where, how** or **if/whether** when the corresponding direct question begins by a verb.
 "First we should study **what** is the relationship between X and Y."
 "The main problem is **whether** X can be applied in Z."
 - The word order is direct!
 - No auxiliary word **do**
 - No comma!
 - No question mark

© SolCT 2020

Technical Writing and Presentation

62

62

Punctuation

- **Goal:** to make the text clearer.
- The English punctuation rules do not always coincide with the rules of your mother tongue.
- Usually you manage with just two marks: **full-stop** and **comma**!
- The basic rules for other marks are:
 - Use colon ':' only when needed.
 - Avoid semicolon ';' and dash '—'.
 - Avoid unnecessary parantheses '(...)'.

© SolCT 2020

Technical Writing and Presentation

63

63

Comma is used

1. To separate introductory phrases and conjunctions (however, thus, similarly, etc.)
 "Despite the high time complexity, X is often used..."
2. When the sentence begins with a dependent clause.
 "Since x is a statistic, it is also a random variable."
3. When a non-restrictive relative clause is embedded into an independent clause or ends a sentence.
 "X, which is responsible for data preprocessing, initializes Y."
4. When two phrases with the same meaning are used side by side.
 "One of the most useful statistics is x, the sample mean."
5. When the sentence begins by an infinitive structure
 "To find the lower bound for the confidence interval, we isolate..."
6. To separate items in a list of three or more items.
7. To avoid ambiguity.
 "Instead of hundreds, thousands rows of data is required"

No comma is used

- When an independent clause is followed by a restrictive relative clause or is embedded with a restrictive rel. clause (especially before **that**).
Exception: "It must be remembered, however, that..."
- Between two independent clauses (in British English).
- Before an indirect question.
- When you begin by a prepositional phrase expressing the place.
- "In this section we discuss..." "In Chapter 3 we defined..."
